

Holt Micro-Forest

A local community initiative

www.holtmicroforest.com

The Holt community has a vision to establish a micro-forest and nature play area in our suburb. You are invited to join the journey and help shape this exciting initiative.

The Holt Micro-Forest will be an urban sanctuary: a dense pocket of 1500 native trees, shrubs, grasses, ground covers and creepers. It will cool the local environment and improve the health and biodiversity of the local ecosystem, with habitats for native birds and insects, and absorbing carbon.

A creative nature playscape for children will be established. The initiative will deliver health, wellbeing and educational benefits to the local community, providing an attractive, safe and comfortable place for locals to gather. It will strengthen community ties and provide commercial benefits to local businesses.

The community will be invited to be involved in all stages including site selection, design, planting and maintenance.

We need your help!
